

TONE YOUR WAY

ROYAL FLUSH

Royal Flush is a dual channel overdrive, with separate controls for each channel. The first channel is a low gain overdrive and is designed to create tube amp "early break-up" overdrive for rhythm tone, with tone clarity. The second channel is a medium gain overdrive and is designed to capture creamy and rich sound of an amp-like distortion crunch. Both channels engaged, emulate a more aggressive cranked tube amp sound with tons of sustain.

OPERATION TRINITY

Operation Trinity is designed to emulate smooth overdrive to massive distortion crunch, with dynamic touch sensitive frequency response, based on the famous British voiced amps.

VIBLER

Vibler is a full analog audio-path phase shift effect and is designed to capture two of the most famous effects, the 1959 Shin-Ei Uni-Vibe Chorus/Vibrato and the 1970's vintage Bad Stone Phase Shifter. It is designed to emulate an organic, rich Leslie type effect, while combining smooth ultra-warm modulation from very slow swoosh to fast warble.

FUZZYTALE

Fuzzytale is a Fuzz Face distortion and is designed to capture the legendary 60's Dallas-Arbiter Fuzz Face warm and rich vintage fuzz tone, provided by NOS hand-matched Russian germanium transistors.
